COINMERGE

ECOSYSTEM WHITE PAPER

🌐 📱 🔲

COINMERGE.IO

CONTENTS

FORWARD

CoinMerge Technologies started out as an idea like any other in the Web3 industry. Create a new utility to improve the cryptocurrency user's experience and get a foothold in the market. With any burgeoning industry, there are pioneers and entrepreneurs who take leaps of faith that their idea will one day become a successful business in a competitive market.

.

Since inception, we have watched thousands of Cryptocurrencies and Web3 businesses come and go. Usually earnestly, they presented their business model, made a pitch to potential holders, and did their best to move the market before ultimately hitting a wall and no longer having the funds or public interest to continue. Those that purchased those tokens were left holding something of no value and ultimately lost a gamble that they took on a team and vision.

That is NOT our story.

Through the tireless work of the team and the holders, **CoinMerge Technologies** has slowly become a staple in the Cryptocurrency space. A familiar name that we believe will become the true foundation of the way Cryptocurrency holders socialize, learn, access data, and trade in Decentralized Finance.

At the foundation of our longevity and ability to survive are some common traits:

- Taking responsibility for the vision we portrayed to our holders.

- Selflessness and the willingness to 'pay it forward' for the good of the company.

We invite you all to join our journey to truly change Decentralized Finance and aid in it's global adoption.

OVERVIEW & HISTORY

CoinMerge started as an LLC in June 2021 and has grown exponentially since that time.

Our flagship platform, CoinMerge.io, went live on September 30th 2021. The CoinMerge team has meticulously crafted a new kind of platform which combines all of the best features from top web 3 resource sites and community tools such as:

Dextools
CoinMarketCap
Opensea
Etherscan/BSCscan
Telegram
Twitter
Uniswap
Pancake Swap

Since that time, the community and platform have continued to develop and evolve into what eventually got rebranded as CoinMerge Technologies (C-CORP) in Q3 2022.

We shifted gears from being a single product business to having an enterprise with different products and revenue sources.

Additionally, we renamed our flagship platform from "Coinmerge, Social Media ReDefined" to "CMOS, CoinMerge Operating System."

This change to CMOS reflected the scope increase on the functionality as well as the future plans for the codebase.

MISSION
STATEMENT

CoinMerge Technologies aims to be a premier enterprise and staple in the Decentralized Financial space utilizing its two major utilities:

CMOS: COINMERGE OPERATING SYSTEM

&

COINMERGE LIBRARY

We will ethically monetize these utilities and bring value to the company and the investors.

PAIN POINTS
WE AIM TO SOLVE
IN CRYPTO

There is an overwhelming amount of information traders need to be aware of 24/7, and hundreds of pages, channels, and sites to juggle just to access a fraction of the relevant data traders need to be successful and invest in a responsible and informed way.

Right now, investors must constantly switch between analytic/trade resources (such as Uniswap, DexTools, PooCoin, Bog Tools, Uniswap, Pancake Swap), while also having to toggle between multiple Telegram Chats, Discord Channels, Newsfeeds like Twitter and Facebook, all just to keep up with a single project and community.

This is a daunting task for first time traders and even highly-seasoned crypto investors acknowledge that this is a nightmare; there just hasn't been a better solution available.

Until Now.

CoinMerge has simplified this process by combining all of these tools and functions into a single, seamless platform and upcoming mobile application.

For the global adoption in the cryptocurrency future, we want to also be one of the leading data providers as every site begins to adopt Cryptocurrency functionality.

We truly aim to be the "**All in One Crypto Enterprise**"

CMOS
COINMERGE OPERATING SYSTEM

What started out as a simple social media platform has become so much more. CMOS stands for Coinmerge Operating system. We therefore, no longer classify ourselves as SocialFi or a Social Media Platform as it's not encompassing enough to capture the essence of CMOS.

Although this is a web/app based product it's entirely designed to work like windows or MacOS in that you can open dozens of applications within the platform that provide a variety of different Web2 and Web3 tools to advance your trading goals. In the long term scope, we want to make creator kits so developers can build their own DAPPS on the CMOS Platform.

CMOS is a completely Free to Use Product.

In its first iteration of V3, we will build 12 different utilities for users to use within the platform:

1. Social Media Newsfeed rivaling Twitter/FB/Instagram.

2. Chatroom experience rivaling Telegram/Discord.

3. Project page list where users can filter projects based on different data points and aggregate data on new and existing projects added to the Blockchain.

4. Customizable Project Pages that displays unique information that can help users learn, get updates from Projects, and get metrics on their trading.

5. Customizable Profile Pages, where users can engage with others to socialize about their Crypto Experience, Ask Questions, or Promote Projects.

6. Asset Tracker/Wallet/Blockchain Explorer. Looking to combine all the best features of Metamask, Zerion and Etherscan/BSCscan into one page.

7. A full, up to the second, Charting and TXN System for all Ethereum and Binance tokens.

8. An NFT aggregation tool to show users all NFTs that are in their wallet from various marketplaces, combined with an NFT marketplace of our very own where users can mint, buy, sell, auction, and create NFT collections.

9. Staking. We allow our users to stake our token and allow other tokens to stake via our platform.

10. Fully integrated Custom Swap that accesses both Uniswap and Pancake Swap.

11. Voting Page where users can vote on projects and follow users to throw support behind their investments for free.

12. CoinMerge Radio, a public broadcast system for users and Projects to initiate Live Voice Chats to reach new investors and update existing ones. This will also have a private function for private Voice Chats.

COINMERGE
LIBRARY

CoinMerge Technologies is proud to announce a brand new utility in our ecosystem.

Coinmerge Library is an API and Node Service (in conjunction with our partners at BYLO) that allows Cryptocurrency Developers to use Blockchain scanning to pull out the information they need for their products.

Paid API Services

For all EVM Chains:

- Use the CoinMerge API
- Get Pool Price, 1d/3d/1w/2w/1mo Volume, Transaction Count, Holder Count, Market cap (STATS)
- Get Pool Transactions
- Get General Pool Info (Token0 and Token1 Info)
- Get Live and Historical Native Prices for ETH, BNB, BTC
- Get Blocks by Time or Block Number
- Get Wallet Transactions
- Get Wallet Assets
- Get Monthly and Annual Profit/Loss Estimates by Wallet
- Get OCHLV Chart Data (Candles)
- Get Simple Chart Data (Lines)
- Subscribe to Charting Web Sockets
- Subscribe to CoinMerge Chat Feed

Free Services

Use a Simplified Web3 Interface to:

- Make Contract Calls
- Make Raw RPC Calls
- Hook into your own Custom Live Scanners
- Get Transactions
- Get Pool Data
- Get V2/V3 Pool Prices

Miscellaneous

- Data integration with Unity3D (API and Web3 tools)
- If there is enough demand integrate with Unreal and other App Changes.
- Chat integration with Telegram and Discord and CMOS Chatrooms allowing users to see messages from all three platforms and communicate with all three platforms at once.

Bylo Node Service

For more Advanced Developers and Coders, users can get their own dedicated un-throttled servers and nodes.

This is a Boutique Service and is tailored to your development needs with active support for your specific Crypto Data needs. Nodes are pruned for you and unkept.

As this service grows, backup node systems will be in place to ensure your data is always up to date and accurate.
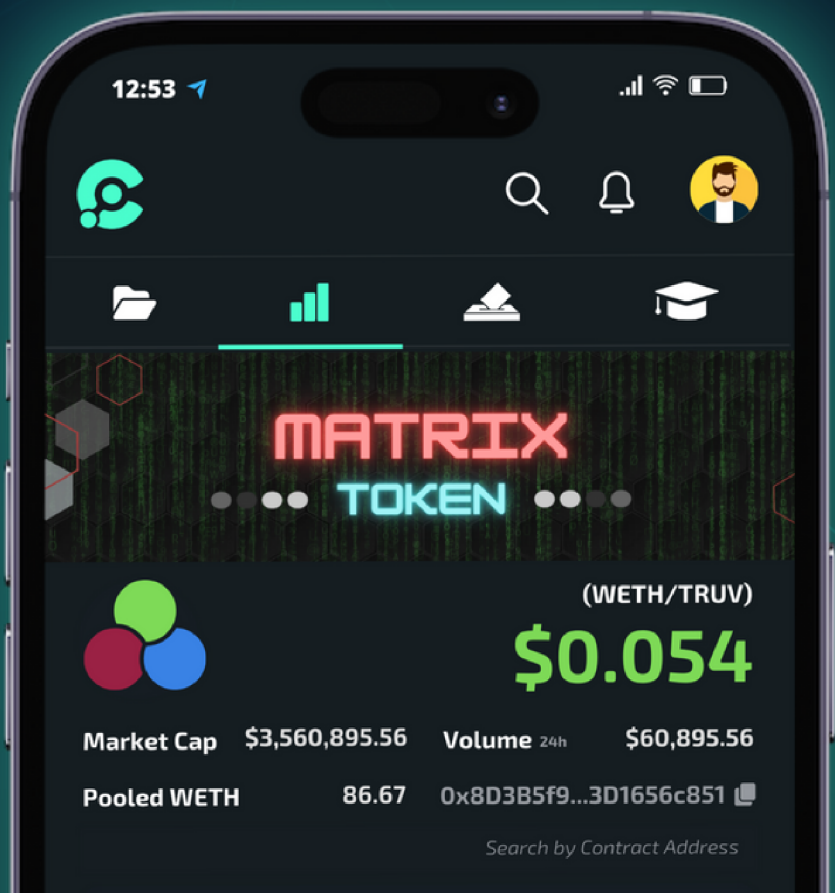

BUSINESS MODEL

CoinMerge Technologies Inc is revolutionizing and Re-DeFining Social Media for Web3 - we have built the first true All-In-One Platform that helps bridge the gap between DeFi and investors around the globe by offering a Complete, Custom Built Platform for all things DeFi.

Being that our Platform and Technology is Custom Built, this opens the door for a wide range of monetization that will allow us to continue to grow and expand our reach globally - a full range of current and future monetization summaries are as followed:

Current Monetization Strategies

Banner Ads

Customers can create a Custom Banner ad strategically located at the top of all project charts that will be visible to all current users; the fee will change as we grow, but is currently the top choice for customers as it provides instant awareness being that the Banner ad is a major focal point on the Platform.

Market Cap $3,560,895.56   Volume 24h $60,895.56

Pooled WETH

Featured Chart

Customers can pay to have their Project Chart be the Chart that automatically loads when users open the Charting tab on the CoinMerge Platform providing instant visibility to their project to all users that open Charts on the Platform.

Tru Valu Token
H: 0.055 L: 0.048 C: 0.0001 2.13%

30m

Verification

Users and or Influencers can pay to have their username verified on the CoinMerge Platform; many users choose this route to provide credibility to their Name and Brand.

12:53

Crypto Jess

+ Add   **395** Followers

Timeline   About   Favorites   NFTs

Crypto Jess - 15m

Ive been in talks with some major influencers and we are all gonna collectively make a pick later this

AMAs & Social Media Promotion

Customers can pay to have an AMA hosted by CoinMerge.

Future Monetization Strategies

Advertisements on Social Media News Feed

Customers will have the ability to place advertisements that will be posted on both individual users, and projects/influencers Social Media Timelines.

Data Licensing

CoinMerge Technologies has spent a tremendous amount of time and capital building code and storing Blockchain Data on our own servers and nodes; while we use this data for our own Platform, we can also build API endpoints to allow prospective customers to access specific data sets such as Holder Count, Market Cap seamlessly and efficiently.

Featured Chat

A token can pay for their Chatroom to show up in everyones chat list at the top (just below the community lounge) with a gold border revealing it's a Promoted Chatroom.

Badges

Users will be able to buy Specialized Badges and gift them to other Users or Projects. These badges will be stored forever with that project and have a variety of use cases across the platform.

NFT Marketplace Fees

There will be a small fee for minting NFTs and storing them on our servers and a small fee for buys and sells of NFTS traded within our NFT Marketplace.

Decentralized Swap Fees

We will be adding a small fee to trades that occur on our Decentralized Swap.

CoinMerge Technologies Inc. accepts the following payments for our current and future monetization strategies:

- Traditional Fiat, such as USD
- Crypto Currency limited to: Bitcoin, Ethereum, BNB, USDT, BUSD, and USDC
- CMOS Tokens (**5% Discount if paid in CoinMerge Tokens**)

Burn Mechanism

When people use CMOS tokens as a coupon for various functionalities on the platform, 25% of that CMOS will be sent to a Burn Wallet, reducing the Circulating Supply. The other 75% of the tokens are property of CoinMerge Technologies Inc.

CoinMerge Technologies Inc. is free to give away, store, transfer between shareholders, send as compensation for Marketing or Development, or Sell CMOS tokens. This means as more and more customers pay in CMOS token, an increasing percentage of the supply gets truly burned, increasing the scarcity.

ETHICS &
CODE OF CONDUCT

CoinMerge celebrates the foundational values of responsibility, transparency, and integrity.

A PROVEN TRACK RECORD

JUST HONEST AND TRANSPARENT BUSINESS PRACTICES

The Crypto-sphere blurs the lines between the professional aspects of a project and the casual aspects of being a community member.

This is an incredible phenomenon which allows investors unparalleled access to projects and fosters remarkable growth. However, one of the biggest drawbacks to this setup comes from unclear codes of conduct.

At CoinMerge, we hold self-expression and communication at the heart of our project, so there are only a few kinds of content which will be removed/banned:

- Racist or discriminatory language or content

- Threatening comments/material

- Illegal activity or encouraging Illegal activity or violence
